Numbers 1 and 2 – 1 February 1998

Announcement of Protocol Articles v

Research reports

Filtration capture and immunoelectrochemical detection for rapid assay of *Escherichia coli* O157:H7
J.D. Brewster and R.S. Mazenko (USA) 1

Detection of thioredoxin in human serum and biological samples using a sensitive sandwich ELISA with digoxigenin-labeled antibody
K.C. Das and C.W. White (USA) 9

Quantitative studies of heteropolymer-mediated binding of inactivated Marburg virus to the complement receptor on primate erythrocytes
A. Nardin, W.M. Sutherland, M. Hevey, A. Schmaljohn and R.P. Taylor (USA) 21

Optimisation of a heterogeneous non-competitive flow immunoassay comparing fluorescein, peroxidase and alkaline phosphatase as labels
A. Lindgren, J. Emnéus, G. Marko-Varga, H. Irth, A. Oosterkamp and S. Eremin (Sweden, The Netherlands, Russia) 33

Improved ELISA proliferation assay (EPA) for the detection of in vitro cell proliferation by a new Ki-67-antigen directed monoclonal antibody (Ki-S3)
S.O. Frahm, B. Zott, C. Dworeck, J. Steinmann, J. Neppert and R. Parwaresch (Germany) 43

Flow cytometric quantitation of yeast a novel technique for use in animal model work and in vitro immunologic assays
W.L. Chang, H.C. Van der Heyde and B.S. Klein (USA) 51

A flash-type bioluminescent immunoassay that is more sensitive than radioimaging: quantitative detection of cytokine cDNA in activated and resting human cells
J.K. Actor, T. Kuffner, C.S. Dezzutti, R.L. Hunter and J.M. McNicholl (USA) 65

A novel method for DEAE-dextran mediated transfection of adherent primary cultured human macrophages
K.D. Mack, R. Wei, A. Elbagarri, N. Abbey and M.S. McGrath (USA) 79

Particle enhanced immunoassays stabilized by hydration forces: a comparative study between IgG and $F(ab')_2$ immunoreactivity
J.A. Molina-Bolívar, F. Galisteo-González and R. Hidalgo-Álvarez (Spain) 87

An automated method for determination of antibody affinity distribution functions with nanogram quantities
L. Pierson, S. Allauzen, M. Blumenthal and A. Rosenberg (USA) 97

Capture-ELISA based on recombinant PR3 is sensitive for PR3–ANCA testing and allows detection of PR3 and PR3–ANCA/PR3 immunecomplexes
J. Sun, D.N. Fass, J.A. Hudson, M.A. Viss, J. Wieslander, H.A. Homburger and U. Specks (USA, Sweden) 111

Application of an ELISA-elution assay as a screening tool for dissociation of yolk antibody–antigen complexes
A. Kummer and E.C.Y. Li-Chan (Canada) 125

Novel method for in vitro depletion of T cells by monoclonal antibody-targeted photosensitization
T. Berki and P. Németh (Hungary) 139

Development of a novel in vitro co-culture system for studying host response to native bacterial antigens
K.M. Mason, N.J. Bigley and P.S. Fink (USA) 147

Development of an ultrasensitive in vitro assay to monitor growth of primary cell cultures with reduced mitotic activity
R.A. Blaheta, B. Kronenberger, D. Woitaschek, S. Weber, M. Scholz, H. Schuldes, A. Encke and B.H. Markus (Germany) 159

An enzyme based assay for the measurement of complement mediated binding of immune complexes to red blood cells
B.O. Rafnar, K.H. Traustadóttir, Á. Sigfússon, G.J. Arason, H. Valdimarsson and K. Erlendsson (Iceland) 171

A novel ELISA for the evaluation of the classical pathway of complement
J. Zwirner, A. Wittig, E. Kremmer and O. Götze (Germany) 183
Immunopurification of human β_2-glycoprotein I with a monoclonal antibody selected for its binding kinetics using a surface plasmon resonance biosensor
V. Regnault, J. Arvieux, L. Vallar and T. Lecompte (France) 191

Protocol

Laboratory protocols for the quantitation of cytokines by bioassay using cytokine responsive cell lines
A.R. Mire-Sluis and R. Thorpe (UK) 199

Contents of volume 211 (1998) 211

Protocols: Notes to Authors 213
